

Daily Work Progress Report

Name: Ishimwe Serge

Position: Frontend Developer

Date: 6 October 2025

Introduction

Today, I worked on improving the Stock Management module in the Aby HR Management System. The main goal was to make stock requests easier to handle from the frontend and to design and implement the Stock History interface for better tracking of stock activities.

Key Tasks Completed

1.  Stock Management Improvements
 - Refactored and restructured the stock management interface to simplify the stock request process.
 - Ensured the system allows users to easily initiate requests and see updates clearly.

- Enhanced the design and layout for smoother interactions and faster navigation.

2. 📄 Stock History Frontend Development

- Designed and built the frontend for viewing stock history records.
- Displayed all key details such as item names, quantities, actions (issued, returned, requested), and timestamps.
- Ensured the stock history view is responsive, organized, and easy to read.

3. ⚙️ User Experience Enhancements

- Improved data presentation for both stock management and history pages.
- Ensured seamless communication between the frontend and backend endpoints for accurate real-time data display.

📖 Summary

The updates to the Aby HR Management System provide:

- 🏠 Simplified stock management workflows, making it easier for users to create and track stock requests.
- 📄 A clear and functional stock history interface, allowing admins to review all past stock actions.
- ⚙️ Better user experience and design, improving usability and system efficiency.

These improvements make stock-related operations in the Aby HR Management System more streamlined, transparent, and user-friendly.
