🔍 Work Progress Report

Name: Hirwa Mihigo Honore
Position: Developer
Date: 23th September 2025

📝 Introduction

This report outlines the work carried out on the **ABY HR Management System**, specifically focusing on registering and managing the stock of raw materials. The goal was to improve inventory accuracy and provide a more structured way to handle raw material data.

✅ What Was Done

- Implemented functionality to **register stock of raw materials** in the system.

- Structured data models to ensure raw materials are properly categorized and tracked.

- Added validation rules to prevent incorrect or duplicate entries.

- Updated backend services to support smooth stock registration workflows.

- Conducted initial testing to confirm that raw materials can be added, stored, and retrieved effectively.

⚠️ Current Status

- The raw materials stock registration module is working and integrated into the backend.

- Basic testing shows correct functionality, but further testing with real data is required.

- UI enhancements may still be needed for smoother user interaction.

📌 Next Steps

- Perform additional testing with real use cases from HR/Inventory teams.

- Improve reporting features to allow tracking of **stock levels, usage, and history**.

- Work on linking raw materials stock with other related modules (e.g., assets or procurement).

- Prepare documentation for the new raw materials stock registration process.

📚 Summary

The work completed introduced a structured **raw materials stock registration feature** within **ABY HR**, laying the foundation for accurate tracking and better management of resources. This functionality will help the organization maintain inventory accuracy and streamline workflows related to stock management.
